EFFICACY TRIALS 1996-97.

Country: The United States of America

<u>Location</u>	<u>Crop</u>	<u>Pests</u>	<u>Result</u>
Dr.Kathleen Murray Dept. of Biological science Univ. of Maine.	Spruce plantation	Spruce saw fly.	Aerial spray using Helicopter. At the time of spray fully deloped 3 rd instar larvae present. Product controlled defoliation upto 53% whilst on trees treated with synthetic pesticide it was 87%. This is possibly due to presence of 3 rd instars at spraying time.
